This defect commonly comes on with old age, and is thought to be occasioned by a shrinking of the humours, which flattens the cornea, and the coats of the crystalline: And hence, these kind of eyes are called by authors, prajbyta, vifus fenilis; also long-sighted, because they cannot see near objects distinctly. See also jig. 13. j 33. Long-sighted people, in reading, place the book at a greater distance than ordinary, as two or three feet; that being their nearest distance of distinct vision: They also commonly write a large hand, and always chuse a book with a large print j for being obliged to read at a great distance, small letters will not subtend angles sufficiently large, and upon that account will be confused, as to a common eye, at a like distance....
