Compehensive Nonlinear Modelling of Dispersive Heterstructure Field Effect Transistors and their MMIC Applications

By Ingmar Kallfass

Cuvillier Verlag Jun 2006, 2006. Taschenbuch. Book Condition: Neu. 210x146x15 mm. Neuware - A custom HFET model was developed and applied in the design of several MMIC applications. The model is expressly dedicated to microwave circuit design. Its analytical nonlinear equations provide a compromise between physical interpretability, numerical e ciency and global validity. As an essential part of the overall model, the COBRA expression features a highly e cient and accurate description of complex HFET drain current characteristics. A modi cation was introduced to include the reduction of drain current due to the self-heating e ect as well as for improved description of gain compression. A new approach to frequency dispersion modelling extends the model¿s validity range from the microwave- down to the low-frequency and DC regimes. The proposed dispersion model relies on conventional device characterisation techniques and standard parameter ex- traction procedures. The inclusion of multiple dispersion time constants and exponentially decaying step responses accurately re ects the physical nature of individual dispersion ef- fects, providing a correct description of transitions between dispersion regimes both in the time- and frequency domain. As a consequence, the model allows for accurate assessment of dynamic (gain, matching, intermodulation etc.), static (e.g....

Reviews

Most of these publication is the perfect ebook accessible. It is amongst the most awesome publication i have got read through. You wont truly feel monotony at whenever you want of the time (that's what catalogs are for regarding in the event you request me).
-- Prof. Edgar Kshlerin

It is easy in study safer to comprehend. It can be writter in basic phrases and never confusing. It is extremely difficult to leave it before concluding, once you begin to read the book.
-- Emmitt Harber
